#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chopra(U.S. Pat. NO. 7,280,266) in view of Garman(U.S. Pat. NO. 6,846,668).

Regarding claim 11, 12, Chopra discloses an image display panel(fig 16), in which two or more groups of particles having different colors(col 4, lines 14-20; col 16, lines 39-50) and different charge characteristics are sealed between opposed two substrates(fig 16, col 16, lines 39-5), at least one of two substrates being transparent(col 3, lines 5-15), and, in which the particles, to which an electrostatic field produced by a pair of electrodes arranged on one substrate or both substrates is applied, are made to move so as to display an image, characterized in that two substrates of the image display panel are connected by using an adhesive(col 40, lines 12-32 and col 6, lines 13-25). Chopra does not disclose using a thermosetting adhesive or a photo-curing adhesive made from an acrylic, and although Chopra discloses an adhesive can be used, Chopra does not disclose the specific type of adhesive to be used. However, Garman discloses using a thermosetting adhesive or a photo-curing adhesive made from an acrylic for attaching an object to a substrate( col 13, lines 44-

50). It would have been obvious to one skilled in the art at the time of the invention to use a thermosetting adhesive or a photo-curing adhesive made from an acrylic as shown by Garman, with the micro fabricated device of Chopra, since as shown by Garman a photo-curing adhesive made from an acrylic is commonly used in micro fabricated devices for building the structure.
